OCTOBER 2026

TONONE PRESENTS RAZOR, A GLASS COLLECTION INSPIRED BY THE SEA

Tonone introduces Razor, a new collection made from curved textured glass, designed by Anton de Groof. The collection is inspired by the razor shell, a long, narrow shell often found along the Dutch coast. The elegant, slightly curved shape of the shell is the starting point for this family of lamps.

INSPIRED BY THE SEA

Razor translates the shape of the shell into glass. The curved lines refer to the soft shape of the razor shell. The textures in the glass are inspired by the surface of the sea, shaped by wind, movement and reflections of light.

When the lamp is switched on, the light brings the texture of the glass to life. It creates a warm and layered effect of light, depth and shadow. Even when the lamp is switched off, Razor remains a distinctive object in the room.

CURVED TEXTURED GLASS

Curved textured glass is at the heart of Razor. A special technique is used to bend the glass into a shape inspired by the soft curve of the shell. The glass is then held securely inside a metal frame.

The combination of shape, glass texture and light creates a lamp that provides light and also adds visual character to the room. The glass catches and spreads the light in a soft way, giving each version its own light effect.

CRAFTSMANSHIP AND MODERN LED TECHNOLOGY

Razor uses glass made with a traditional rolling method. In the past, this technique was often used to make textured glass for historic windows and stained glass. The rolling method gives the glass a lively texture and a subtle vintage look.

Razor combines this traditional technique with modern LED technology. Material, light and shape work together in a collection that reflects Tonone's interest in technology and construction. The complete Razor collection is decorative and dimmable.

PRESS RELEASE RAZOR

THREE VERSIONS, ONE DESIGN LANGUAGE

Razor is available in three versions: Pendant Horizontal, Pendant Vertical and Wall. Each version uses the same curved design language, but brings light into the space in its own way.

RAZOR PENDANT HORIZONTAL

The Razor Pendant Horizontal is about one metre wide and consists of two glass panels in different lengths. The panels connect to each other and together create a layered pattern of lines.

PRESS RELEASE RAZOR

The pendant gives warm, atmospheric light above a dining table, bar or long worktable. Its horizontal shape creates a calm but distinctive element in the room.

The Pendant Horizontal is available in five glass versions, in transparent or brown glass. The metal frame is available in brass or stainless steel.

RAZOR PENDANT VERTICAL

The Razor Pendant Vertical consists of three glass panels that together create a round, layered shape around a brass frame.

The pendant works well in a high open space, an entrance or next to a bed. By hanging several lamps together at different heights, you can create more rhythm and depth in the room.

The Pendant Vertical is available in five glass versions, in transparent or brown glass. The metal frame is made from brass.

RAZOR WALL

The Razor Wall consists of one curved glass panel that softly surrounds the light source. The light shines through the textured glass and creates a soft, long reflection on the wall.
The wall lamp adds warm, atmospheric light to a hallway, next to a bed or as an accent on a wall. Even when the lamp is switched off, the curved glass remains a distinctive part of the interior.

The Razor Wall is available in five glass versions, in transparent or brown glass. The metal frame is made from brass.

AVAILABILITY AND PRICE INFORMATION

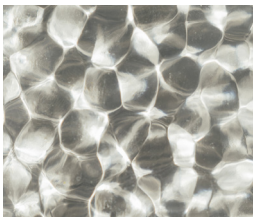

RAZOR will be available this fall, exclusively through the Tonone webshop and selected dealers. Price information, technical specifications and images are available from Tonone on request.
